### **March 18-24: Fix-a-Leak Week**

MADISON - Because minor water leaks account for more than 1 trillion gallons of water wasted each year in U.S. homes, the Public Service Commission of Wisconsin and the Environmental Protection Agency's WaterSense program are promoting "Fix-a-Leak Week," March 18 - 24, 2013, as a reminder to Wisconsin residents to check household plumbing fixtures and irrigation systems for leaks.

PSC Chairperson Phil Montgomery noted, "Leaky faucets and toilets waste our precious water resources, and fixing leaks is one of the cheapest and easiest ways to conserve water and save energy. The Commission encourages Wisconsin water utilities to provide information to their customers to help them eliminate leaks."

There are many ways to identify and repair dripping faucets, running toilets, and leaky showerheads. In most cases, fixture replacement parts pay for themselves quickly.

In order to determine if a home has a water leak, customers should check the water meter before and after a two-hour period when no water is being used. If the meter number has changed after the two-hour period of non-use, a leak may be present. If a leak is present, a few simple steps may help customers save money:

- Leaky toilets are most often the result of a worn toilet flapper. Replacing the rubber flapper is a quick fix that could save a home with a constantly running toilet up to 200 gallons of water per day.
- Reduce faucet leaks by checking faucet washers and gaskets for wear and, if necessary, replace the faucet with a WaterSense labeled model.
- For a leaky garden hose, replace the nylon or rubber hose washer and ensure a tight connection to the spigot using pipe tape and a wrench.

- Landscape irrigation systems should be checked each spring before use to make sure they are not damaged by frost or freezing.

If homeowners have to replace a plumbing fixture, it may be prudent to first check for a WaterSense label. WaterSense labeled toilets, faucets, and showerheads have been independently tested and certified to save water and perform as well as or better than standard models.

WaterSense also partners with certified landscape irrigation auditors, designers, installers, and maintenance professionals.
